

Tensile stress and strain

Stress/Strain is the most used piece of design data for a plastic material:

- Defines the relationship between applied load and resulting deformation in simple tension.
- Defines the stiffness or modulus in simple tension.
- Defines the maximum load a material can sustain without permanent damage.
- Area under the stress/strain curve is an indication of the energy absorbing capability of the material.
- Defines the ultimate stretch a plastic can attain before failure.
- Only accurate for short term loading.

Stress

Applied load, normalized by the supporting cross sectional area. Stress is reported in pounds per square inch (psi) or Mega Pascals (MPa).

Strain

Deformation or stretch normalized by the original length. Strain is reported in percentage (%), inch per inch (in/in), or mm/mm.

Modulus (tensile)

Stiffness, the ratio of stress/strain. The tensile modulus is reported in psi or Giga Pascals (GPa).

Yield stress

The initial stress at which an increase in strain occurs without an increase in stress.

Ultimate elongation

Maximum possible elongation (usually much larger than the yield strain—the strain at yield stress).

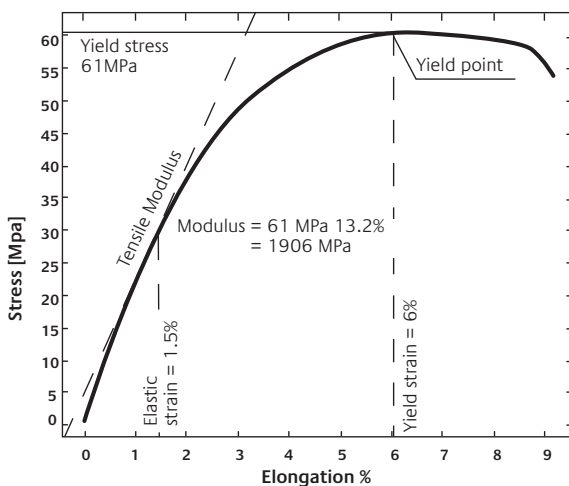

Figure 1
Typical stress/strain diagram

note

Curves shown here may extend beyond 8% elongation.

Figure 2
ASTM D638 Tensile specimens

Increasing glass content:

- Increases modulus.
- Increases maximum load capability.
- Decreases elongation.

Figure 3

Increasing rate:

- Increases modulus.
- Decreases elongation.
- Increases yield stress.

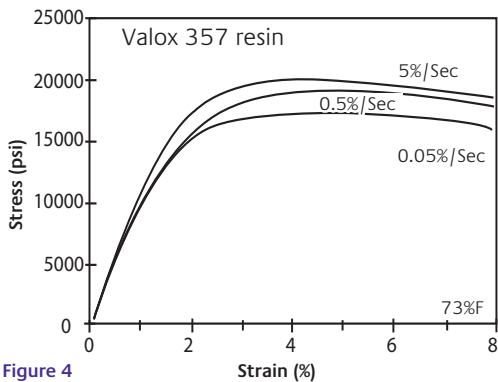

Figure 4

Increasing temperature:

- Decreases modulus.
- Decreases maximum load capability.
- May increase or decrease elongation.

Figure 6

Flow direction:

- Higher modulus.
- Higher yield strength.
- Lower elongation.

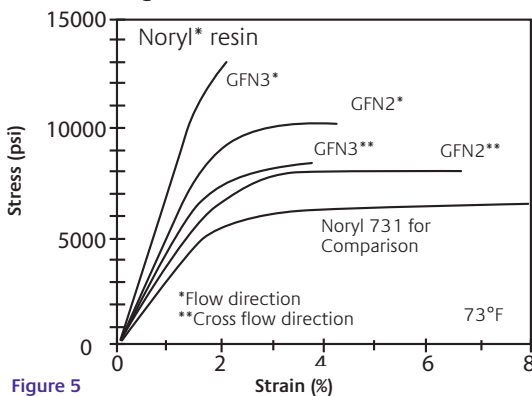

Figure 5

A plot of tensile modulus vs. temperature (fig 7).

This Shows the same transitions measured in Dynamic Mechanical Analysis.

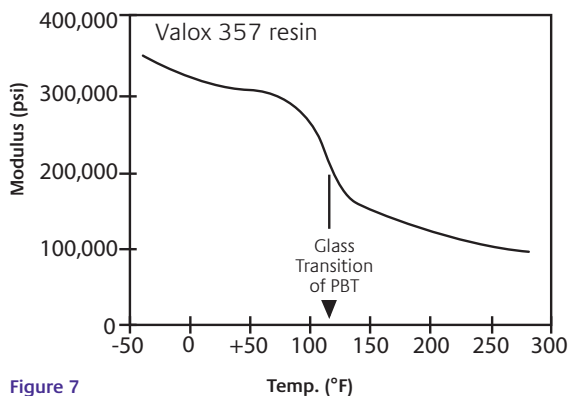

Figure 7

More stress/strain plots for a variety of resins are available through our Multipoint Data tools on-line at sabic-ip.com.

THE MATERIALS, PRODUCTS AND SERVICES OF SABIC INNOVATIVE PLASTICS HOLDING BV, ITS SUBSIDIARIES AND AFFILIATES ("SELLER"), ARE SOLD SUBJECT TO SELLER'S STANDARD CONDITIONS OF SALE, WHICH CAN BE FOUND AT <http://www.sabic-ip.com> AND ARE AVAILABLE UPON REQUEST. ALTHOUGH ANY INFORMATION OR RECOMMENDATION CONTAINED HEREIN IS GIVEN IN GOOD FAITH, SELLER MAKES NO WARRANTY OR GUARANTEE, EXPRESS OR IMPLIED, (i) THAT THE RESULTS DESCRIBED HEREIN WILL BE OBTAINED UNDER END-USE CONDITIONS, OR (ii) AS TO THE EFFECTIVENESS OR SAFETY OF ANY DESIGN INCORPORATING SELLER'S PRODUCTS, SERVICES OR RECOMMENDATIONS. EXCEPT AS PROVIDED IN SELLER'S STANDARD CONDITIONS OF SALE, SELLER SHALL NOT BE RESPONSIBLE FOR ANY LOSS RESULTING FROM ANY USE OF ITS PRODUCTS OR SERVICES DESCRIBED HEREIN. Each user is responsible for making its own determination as to the suitability of Seller's products, services or recommendations for the user's particular use through appropriate end-use testing and analysis. Nothing in any document or oral statement shall be deemed to alter or waive any provision of Seller's Standard Conditions of Sale or this Disclaimer, unless it is specifically agreed to in a writing signed by Seller. No statement by Seller concerning a possible use of any product, service or design is intended, or should be construed, to grant any license under any patent or other intellectual property right of Seller or as a recommendation for the use of such product, service or design in a manner that infringes any patent or other intellectual property right.
